

Single class with two file return

App.js

```
import React from 'react';
import PassMessage from './PassMessage'

import FailMessage from './FailMessage'
class App extends React.Component
{
  render()
  {
    return(
      <div>

        <PassMessage/>,
        <FailMessage/>
      </div>
    )
  }
};
export default App;
```

PassMessage.js

```
import React from 'react';
import './App';

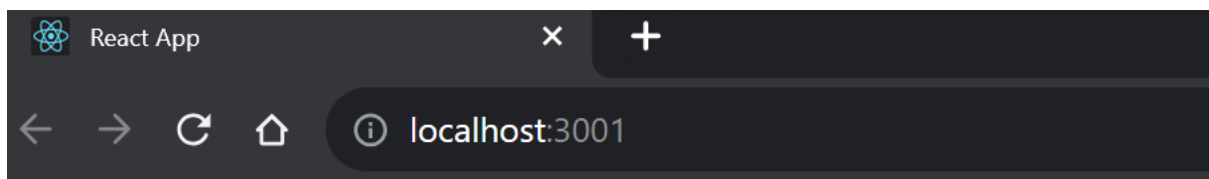

class PassMessage extends React.Component
{
  render()
  {
    return <h1>Successfully ! Passed the Test</h1>;
  }
};
export default PassMessage;
```

FailMessage.js

```
import React from 'react';
import './App'

class FailMessage extends React.Component
{
  render()
  {
    return <h1>Sorry! Better Luck Next Time</h1>;
  }
};
export default FailMessage;
```

OutPut ;

Successfully ! Passed the Test

,

Sorry! Better Luck Next Time
