

Day-5 with mount and update and unmount

App.js

```
import React from 'react'
import './project/lifecycle'
import Apped from './project/lifecycle'
export default function App() {
  return (
    <Apped/>
  )
}
```

Lifecycle.js

```
import React, { useState ,useEffect} from "react";
function Apped()
{
  const[count,set]=useState()
  console.log("mount",count);

  useEffect(()=>
  {
    console.log("updated",count);
    return()=>{console.log("unmount")}
  }
  )
  return(
    <div>
      <button onClick={()=>set("Pos")}>pos</button>
      <button onClick={()=>set("user")}>user</button>
      <button onClick={()=>set("comment")}>comment</button>
      <h1>{count}</h1>
    </div>
  )
}
export default Apped;
```

output

pos user comment

comment

```
mount Pos lifecycle.js:5
mount Pos lifecycle.js:5
unmount lifecycle.js:10
updated Pos lifecycle.js:9
mount user lifecycle.js:5
mount user lifecycle.js:5
unmount lifecycle.js:10
updated user lifecycle.js:9
mount comment lifecycle.js:5
mount comment lifecycle.js:5
unmount lifecycle.js:10
updated comment lifecycle.js:9
